I. INTRODUCTION

Italdesign Giugiaro S.p.A. deals with design and production of models and prototypes.

In this role, we are committed in order to become a supplier leader in sustainable mobility and a role model to preserve and protect our environment as well.

We are facing climate changes challenge, and we accept it.

We are aware of our environmental responsibility and of all environmental impacts connected with our actions and products.

We use our innovation capability in order to achieve a global reduction of environmental impact.

We face the challenge associated with the entire life cycle related to our products. At the same time, our technologies support our customers in reducing their ecological impact and give an important contribution to environmental protection.

The Management, aware of its own responsibilities, is committed to assume and pursue a proper behaviour from environmental point of view, a behaviour aimed at continuous improvement, identifying and involving all the stakeholders.

2. LEADERSHIP BEHAVIOUR

Our managers, at all organizational levels, are aware of environmental risks resulting from their business activities. Through words and actions, they both confirm their effort to act in compliance with regulations and internal standards and rules, and to accept to be patterns of behaviour for environmental protection.

Our managers are responsible to guarantee that all the requirements described in this Environmental Policy, are properly implemented and respected and are committed to make sure that all the employees have been trained and have all the qualifications needed.

Management members have included environmental protection in business processes. Priorities in decision-making, have been aligned with regard to the currently valid sustainability declaration.

Management is committed to make this document available to stakeholders, to share it inside the organization and to maintain it as documented information.

3. COMPLIANCE

Italdesign Giugiaro S.p.A. undertakes to comply both with the legal requirements and with the commitments faced with stakeholders.

Our Environmental Management System (EMS) guarantees that aspects and ecological obligations in our activities have been identified and correctly taken into account. The implications of non-conformities to EMS requirements will be processed according to the Group organizational guidelines.

Compliance of our actions with what is mentioned in this environmental policy is evaluated once a year, through proper indicators (KPIs), by Italdesign Giugiaro S.p.A. Management.

4. ENVIRONMENTAL PROTECTION

Our processes are based on a lifecycle approach aimed at risks and environmental impacts reduction and at seizing opportunities to protect environment.

These opportunities can involve renewable energy, reduction and control of consumptions.

We are committed to reduce our environmental impact according to a *life-cycle thinking* approach of our processes, products and services, taking into account at the same time also the economic feasibility.

In order to demonstrate that we have reached our goals, once a year we disclose the environmental key indicators (KPIs) and we show in a transparent way the progress of our efforts.

5. STAKEHOLDERS

We consider stakeholders' involvement (employees, customers, suppliers etc.) very important and we take into account their significant expectations.

Italdesign-Giugiaro S.p.A. Management takes into account any suggestions on environmental protection coming from stakeholders, discussing and evaluating them with the aim of processes improvement.

6. CONTINUOUS IMPROVEMENT

In our efforts for reducing environmental impacts of our products, services and processes, our Environmental Management System is internationally recognized and it is validated by an independent certification body. This ensures that environmental requirements are implemented not only in our main activities but also in our decision-making.

We are committed to put in place the best environmental technologies available, to reach our goals and to satisfy significant expectations of our stakeholders.

Inside the organization, our Management focuses its attention on the following impacts, considered significant:

- Waste
- Energy consumption
- Emissions
- F-Gases
